

Scotchcal™ Luster Overlamine 8524

For Piezo Ink Jet Printing Only

Description

Overlamine 8524 is a 50 micron (0.05mm) film that provides durable protection when applied to selected 3M graphic films. It is ideally suited for use on 3M films that are specifically designed to conform with heat to moderately textured surfaces, providing better handling and removal characteristics.

Recommended Types of Graphics and End Uses

All end use recommendations are based on the graphics manufacturer and/or installer testing and approving each unique application surface. The 3M Basic Product Warranty is offered for the film.

- Refer to the Product Bulletin for the base film you are using to determine suitable and use.

Warranty Information

Product Only Warranty

This product has been tested and is believed to be a good product when used as recommended in this bulletin. The film is covered by the 3M Basic Product Warranty and is guaranteed to be free of physical and manufacturing defects.

Refer to the Product Bulletin for the base film you are using for expected durability information.

Warranty and Limited Remedy

The following is made in lieu of all other express or implied warranties, including any implied warranty of **merchantability** or fitness for a particular purpose or implied warranty arising out of a course of dealing, custom or usage of trade: all 3M products are warranted to be free of defects in materials and manufacture at the time of shipment and to meet the specifications stated in this Product Bulletin. 3M will replace or refund the price of any 3M materials that do not meet this warranty within the specified time periods. These remedies are exclusive. **In no case shall 3M be liable for any direct, indirect, or consequential damages, including any labour or non-3M materials charges.**

Fabrication

Use the minimum amount of pressure needed and unwind tension to obtain good lamination. This helps reduce the chance of the overlamine tunneling as it is applied to the base film. However, tunneling will disappear when the graphic is applied with heat and pressure to a textured surface.

Keep the overlaminated film flat and racked, if possible. If rolling is required, use the largest roll available (at least 15cm diameter).

Refer to Instruction Bulletin 4.22 for additional details.
